Newsclipping Log (Due at last week of classes; week before finals):

This assignment requires that you keep a weekly log of biology-related news. The news items must be from regular newspapers, non-technical magazines, and Internet news sources. The weekly article must be current for the semester - that is, it must be from a source published that week, bimonthly period or month. You may submit photocopies or clippings of the original article. The article must tell how some aspect of biological information is impacting everyday life. Included with each article you must write a one paragraph statement on how that information may impact every day life. Also, for each article you must do a one page critique about the following elements of the article:

- Is there enough information in the article to determine its accuracy?
- Does the information have a bias?
- Does the information show evidence of scientific method?
- What is the long-term impact of this information on humans?
- Could you use the information in the article to personally improve your life?
