

Here are several graphs (similar to those done in class) to practice.

Be sure to find all four information bits as demonstrated in class, then sketch the graph.

1.  $f(x) = -\sin(x) - 2$

2.  $f(x) = \sin(x) + 4$

3.  $f(x) = \cos(x) + 1$

4.  $f(x) = -\cos(x) - 2$

5.  $f(x) = \sin(x) + 3$

We will discuss this in more detail next week, but you might want to try:

6.  $f(x) = 2\sin(x) - 3$
