3.7: Optimization Problems

We often need to solve problems involving optimization: finding the maximum or minimum of some quantity.

Process for Solving Optimization Problems

1. Assign a variable to each quantity mentioned. If possible, draw and label a diagram.
2. Write an expression for the quantity to be optimized.
3. Write the quantity to be optimized as a function of one variable. Determine its domain.
4. Find the minimum or maximum by sketching the curve and finding the relative extrema, or by calculating the absolute maximum or minimum on a closed interval.

Example 1: Find two positive numbers such that the sum of the first and twice the second is 100, and their product is a maximum.

$x+2 y=100$

Example 2: A farmer wants to construct a rectangular pen next to a barn 60 feet long, using the entirety of one side of the barn as part of one side of the pen. Find the dimensions of the pen with the largest area that the farmer can build if 250 feet of fencing material is available.

$2 x+2 y=130$

$$
x+y=65=7 x=65-y
$$

$y=$ wist of pen

Example 3: A rectangular piece of cardboard can be turned into an open box by cutting away squares from the corners and turning up the flaps. If a piece of cardboard is 6 inches wide and 16 inches long, find the dimensions of the box with maximum volume.
$\dot{x}=$ height of Square
piece we cut ont $0=12 x^{2}-72 x+96$

16

$$
V=(6-2 x)(16-2 x)(x)
$$

$$
V=(6-3 x)\left(16 x-2 x^{2}\right)
$$

$V^{\prime}=(6-2 x)(16-4 x)+\left(16 x-2 x^{3}\right)(-2)$ The col mentions are $2 \times 2 \times 12$
Example 4: A dog food company decides to package its new dog treats, Dusty's Yummy Doggy Kibbles, in cylindrical cans. Each can will be filled to the top with 54 cubic inches of delicious dog treats. What height and radius should be used to minimize the amount of metal required?

$$
\begin{aligned}
& v=541 n^{3} \\
& V=\pi r^{2} h \\
& \text { StA. }=2 \pi r^{2}+2 \pi r h \\
& \begin{array}{l}
r=\text { rains } \\
h=h e i g h t ~
\end{array} \quad \text { StA. }=2 \pi r^{2}+2 \pi r\left(\frac{5^{4}}{\pi r^{2}}\right) \\
& S 4=\pi r^{2} h \quad S \cdot A=3 \pi r^{2}+108 r^{-1} \\
& \frac{54}{\pi r^{2}}=h \quad S_{, A^{\prime}}=4 \pi r-108 r^{-2} \\
& h=\frac{54}{\pi\left(\frac{3}{\pi / 3}\right)^{2}}=\frac{54}{\frac{9 \pi}{\pi^{2 / 3}}}=\frac{6}{\pi^{1 / 3}} \\
& \begin{array}{l}
0=4 \pi r-\frac{108}{r^{2}} \\
0=\frac{4 \pi r^{3}-108}{r^{2}}
\end{array} \\
& 0=4 \pi r^{3}-108 \\
& 10 r=4 \pi r^{3} \\
& \frac{108}{4 \pi}=r^{3} \quad r=\frac{3}{\pi^{1 / 3}} \\
& \text { The radius is } 3 / \pi^{1 / 3} \text { and } \\
& \text { the beishtis 6/41/3 }
\end{aligned}
$$

$$
\begin{aligned}
& A=2 x y \\
& A=2 x(-x+1) \\
& A=-2 x^{2}+2 x \\
& \begin{array}{ll}
A^{\prime}=-4 x+2 & y=1 / 2 \\
0=-4 x+2 & A=2(1 / 2)(1 / 2) \\
4 x=2 & A=1 / 24 n, 1^{2} \\
x=1 / 2
\end{array} \\
& \begin{array}{lll}
A^{\prime}=-4 x+2 & y=1 / 2 \\
0=-4 x+2 & A=2(1 / 2)(1 / 2) \\
4 x=2 & A=1 / 2\left(m_{1} 1^{2}\right.
\end{array} \\
& \begin{array}{lll}
A^{\prime}=-4 x+2 & y=1 / 2 \\
0=-4 x+2 & A=2(1 / 2)(1 / 2) \\
4 x=2 & A=1 / 2\left(m_{1} 1^{2}\right.
\end{array} \\
& \begin{array}{ll}
A^{\prime}=-4 x+2 & y=1 / 2 \\
0=-4 x+2 & A=2(1 / 2)(1 / 2) \\
4 x=2 & A=1 / 24 n, 1^{2} \\
x=1 / 2
\end{array}
\end{aligned}
$$

$$
y=-x+1
$$

 material for the base costs 30 cents per square foot, and the material for the sides costs 10 cents per square foot, and the material for the top costs 20 cents per square foot. Determine the dimensions of the box which minimize cost. What is that minimum cost?

$$
C=.3 x^{2}+.1(x 5)(4)+.2 x^{2}
$$

$$
\begin{aligned}
& V=x^{2} y \\
& y=\frac{20}{x^{2}}
\end{aligned}
$$

$$
c=05 x^{2}+t_{0}\left(\frac{20}{x^{2}}\right)
$$

$$
c=0.5 x^{2}+8 x^{-1}
$$

$$
c^{\prime}=x-\delta_{x}^{-2}
$$

$$
0=x-\frac{8}{x^{2}}
$$

$$
\begin{aligned}
& y=\frac{20}{2^{2}}=5 \quad 0=\frac{x^{3}-8}{x^{2}} \\
& c=05(2)^{2}+\frac{8}{2}=2+4=6
\end{aligned}
$$

min cost is $\$ 6.80$
and dim are 2 ftb by ft by 5 ft
