

### 4.3: Some Rules of Probability

**Example 1:** Need-based financial aid for college students can take the form of grants (do not need to be repaid) or loans (must be repaid). Consider a group of 70 students in which 30 students received grants, 35 received loans, and 13 received both. How many of these students received need-based financial aid?

G = grants received  
L = loans received

$$n(G \cup L) = 17 + 13 + 22 = \boxed{52} \text{ students received aid (grants or loans)}$$

Notation:  $n(A)$  means the number of elements in set  $A$ .

#### Addition Principle for Counting (general counting principle)

For any two sets  $A$  and  $B$ ,

$$n(A \cup B) = n(A) + n(B) - n(A \cap B).$$

If  $A$  and  $B$  are mutually exclusive ( $A \cap B = \emptyset$ ), then  $n(A \cup B) = n(A) + n(B)$ .

*Mutually exclusive:* no outcomes in common (also called *disjoint events*).

For example above:

$$\begin{aligned} n(G \cup L) &= n(G) + n(L) - n(G \cap L) \\ &= 30 + 35 - 13 \\ &= 65 - 13 \\ &= \boxed{52} \end{aligned}$$

#### Probability of unions and intersections:

Probability of a Union of Two Events:

$$P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

If the two events are mutually exclusive (disjoint):

$$P(A \cup B) = P(A) + P(B)$$

4.3.2

**Example 2:** Assume that an equally likely sample space is described by the Venn diagram below.

$$n(u) = 15 + 10 + 30 + 45 = 100$$

$$P(B) = \frac{10 + 30}{100} = \frac{40}{100} = 0.40$$

$$P(A \cap B) = \frac{10}{100} = 0.10$$

$$P(A^c) = \frac{30 + 45}{100} = \frac{75}{100} = 0.75$$

$$P(B^c) = \frac{60}{100} = 0.60$$

**Complements:**

Probability of a complement:

$$P(E^c) = 1 - P(E)$$

$$P(E) = 1 - P(E^c)$$

$$P(E) + P(E^c) = 1$$

**Example 1:** Suppose that the probability of someone voting for a certain candidate is 0.46. What is the probability of not voting for the candidate?

$$P(E) = 0.46$$

$$P(E^c) = 1 - 0.46 = 0.54$$

**Example 2:** Consider the data below, from the Congressional Research Service.  
<https://fas.org/sgp/crs/misc/RS20811.pdf>

**Table 1. Distribution of Household Money Income by Selected Income Class, 2012**

Income Class	# of Households (in thousands)	% of Households
All Households	122,459	100.0
Less than \$5,000	4,204	3.4
\$5,000 to \$9,999	4,729	3.9
\$10,000 to \$14,999	6,982	5.7
\$15,000 to \$19,999	7,157	5.8
\$20,000 to \$24,999	7,131	5.5
\$25,000 to \$29,999	6,740	5.4
\$30,000 to \$34,999	6,354	5.2
\$35,000 to \$39,999	5,832	4.8
\$40,000 to \$44,999	5,547	4.5
\$45,000 to \$49,999	5,254	4.4
\$50,000 to \$59,999	9,358	7.6
\$60,000 to \$69,999	8,305	6.8
\$70,000 to \$79,999	7,170	5.9
\$80,000 to \$89,999	5,969	4.9
\$90,000 to \$99,999	4,901	4.0
\$100,000 to \$124,999	9,490	7.7
\$125,000 to \$149,999	5,759	4.7
\$150,000 to \$199,999	6,116	5.0
\$200,000 to \$249,999	2,549	2.1
\$250,000 and above	2,911	2.4
Median Income	\$51,017	
Mean Income	\$71,274	

Source: U.S. Census Bureau, 2012 Annual Social and Economic Supplement to the Current Population Survey.

- a) What is the probability that a randomly selected household has an income of \$100,000 or more?

$$P(A) = 0.077 + 0.047 + 0.05 + 0.021 + 0.024 = \boxed{0.219}$$

- b) What is the probability that a randomly selected household has an income below \$40,000?

- c) What is the probability that a randomly selected household has an income below \$40,000?

$$\begin{aligned}
 P(< \$40k) &= 0.034 \\
 &+ 0.039 \\
 &+ 0.057 \\
 &+ 0.058 \\
 &+ 0.055 \\
 &+ 0.054 \\
 &+ 0.052 \\
 &+ 0.048 \\
 &= 0.397
 \end{aligned}$$

$E$ : Income  $\geq \$250,000$

4.3.4

d) What is the probability that a randomly selected household has an income below \$250,000?

$$P(< \$250K) = 0.024$$

$$P(E^c) = 1 - 0.024 = \boxed{0.976}$$

e) What is the probability that a randomly selected household has an income of \$20,000 or more?

Use the complement:  $E: \geq \$20K$ ,  $E^c: < \$20K$

$$P(E^c) = 0.034 + 0.039 + 0.057 + 0.058 = 0.188$$

f) Approximate the median household income.

$$P(E) = 1 - 0.188$$

$$= \boxed{0.812}$$

**Example 3:** Consider a standard deck of 52 cards.

a) What is the probability that a randomly selected card is a spade or a heart?

$$\begin{aligned} P(\text{Spade} \cup \text{Heart}) &= P(\text{Spade}) + P(\text{Heart}) - P(\text{Sp} \cap \text{Hrt}) \\ &= \frac{13}{52} + \frac{13}{52} - 0 = \frac{26}{52} = \frac{1}{2} \end{aligned}$$

b) What is the probability that a randomly selected card is a spade or an ace?

$$\begin{aligned} P(\text{Sp} \cup \text{Ac}) &= \frac{16}{52} \text{ or } P(\text{Sp}) + P(\text{Ac}) - P(\text{Sp} \cap \text{Ac}) \\ &= \frac{13}{52} + \frac{4}{52} - \frac{1}{52} = \frac{16}{52} \\ &= \boxed{\frac{4}{13}} \end{aligned}$$

c) What is the probability that a randomly selected card is not a black face card?
