5.2: The Addition Rule and the Rule of Complements

Example 1: Need-based financial aid for college students can take the form of grants (do not need to be repaid) or loans (must be repaid). Consider a group of 70 students in which 30 students received grants, 35 received loans, and 13 received both. How many of these students received need-based financial aid?

Notation: n(A) means the number of elements in set A.

Addition Principle for Counting For any two sets A and B, $n(A \cup B) = n(A) + n(B) - n(A \cap B)$. If A and B are mutually exclusive $(A \cap B = \emptyset)$, then $n(A \cup B) = n(A) + n(B)$. *Mutually exclusive*: no outcomes in common (also called *disjoint events*).

Probability of unions and intersections:

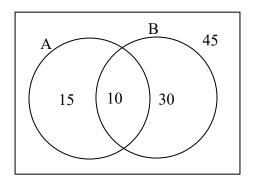

Probability of a Union of Two Events:

 $P(A \cup B) = P(A) + P(B) - P(A \cap B)$

If the two events are mutually exclusive (disjoint):

 $P(A \cup B) = P(A) + P(B)$

Example 2: Assume that an equally likely sample space is described by the Venn diagram below.

Complements:

Probability of a complement:

$$P(E^{C}) = 1 - P(E)$$

 $P(E) = 1 - P(E^{C})$

Example 1: Suppose that the probability of someone voting for a certain candidate is 0.46. What is the probability of not voting for the candidate?

Example 2: Consider the data below, from the Congressional Research Service. https://fas.org/sgp/crs/misc/RS20811.pdf

| Income Class | # of Households (in thousands) | % of Households | | |
|------------------------|-----------------------------------|-----------------|--|--|
| All Households | 122,459 | 100.0 | | |
| Less than \$5,000 | 4,204 | 3.4 | | |
| \$5,000 to \$9,999 | 4,729 | 3.9 | | |
| \$10,000 to \$14,999 | 6,982 | 5.7 | | |
| \$15,000 to \$19,999 | 7,157 | 5.8 | | |
| \$20,000 to \$24,999 | 7,131 | 5.5 | | |
| \$25,000 to \$29,999 | 6,740 | 5.4 | | |
| \$30,000 to \$34,999 | 6,354 | 5.2 | | |
| \$35,000 to \$39,999 | 5,832 | 4.8 | | |
| \$40,000 to \$44,999 | 5,547 | 4.5 | | |
| \$45,000 to \$49,999 | 5,254 | 4.4 | | |
| \$50,000 to \$59,999 | 9,358 | 7.6 | | |
| \$60,000 to \$69,999 | 8,305 | 6.8 | | |
| \$70,000 to \$79,999 | 7,170 | 5.9 | | |
| \$80,000 to \$89,999 | 5,969 | 4.9 | | |
| \$90,000 to \$99,999 | 4,901 | 4.0 | | |
| \$100,000 to \$124,999 | 9,490 | 7.7 | | |
| \$125,000 to \$149,999 | 5,759 | 4.7 | | |
| \$150,000 to \$199,999 | 6,116 | 5.0 | | |
| \$200,000 to \$249,999 | 2,549 | 2.1 | | |
| \$250,000 and above | 2,911 | 2.4 | | |
| Median Income | \$51. | 017 | | |
| Mean Income | \$71, | 274 | | |

Table 1. Distribution of Household Money Income by Selected Income Class, 2012

Source: U.S. Census Bureau, 2012 Annual Social and Economic Supplement to the Current Population Survey.

a) What is the probability that a randomly selected household has an income of \$100,000 or more?

b) What is the probability that a randomly selected household has an income below \$40,000?

c) What is the probability that a randomly selected household has an income below \$40,000?

d) What is the probability that a randomly selected household has an income below \$250,000?

e) What is the probability that a randomly selected household has an income of \$20,000 or more?

f) Approximate the median household income.

Example 3: Consider a standard deck of 52 cards.

a) What is the probability that a randomly selected card is a spade or a heart?

b) What is the probability that a randomly selected card is a spade or an ace?

c) What is the probability that a randomly selected card is not a black face card?
