

## Similarity of Triangles:

Two triangles are similar if the corresponding angles are congruent, and the corresponding sides are proportional.

$$\triangle ABC \sim \triangle DEF$$

**Congruency:**  $\angle A \cong \angle D$ ,  $\angle B \cong \angle E$ ,  $\angle C \cong \angle F$

**Proportionality:**  $\frac{\overline{AB}}{\overline{DE}} = \frac{\overline{BC}}{\overline{EF}} = \frac{\overline{AC}}{\overline{DF}}$

When is a fewer number of congruences/proportionalities enough to conclude that two triangles are similar?

*Side-Angle-Side(SAS) Similarity:*

$$\triangle ABC \sim \triangle DEF$$

Angle-Angle(AA) Similarity:

$\triangle ABC \sim \triangle DEF$

Side-Side-Side(SSS) Similarity:

$$\triangle ABC \sim \triangle DEF$$

**Determine if the following pairs of triangles are similar:**

**How tall is the tree?**

$$\triangle ABC \sim \triangle DEF$$

Find the missing side measurements in  $\triangle DEF$ .
