In general, the formula for Simpson's rule with n subjector als (n is always even) is:

$$S_{n} = \frac{\Delta \times \left\{ f(x_{a}) + 4f(x_{b}) + 2f(x_{b}) + 4f(x_{b}) + 2f(x_{a}) + 4f(x_{a}) + 2f(x_{a}) + 4f(x_{b}) + 2f(x_{a}) + 4f(x_{b}) + 2f(x_{b}) + 4f(x_{b}) + 2f(x_{b}) + 4f(x_{b}) +$$

E.g. Use Simpson's rule rule with n=6 to estimate

$$\int_{0}^{3} dx$$

$$\Delta x = \frac{3}{6} = \frac{1}{2}$$

$$0 \frac{1}{2} \frac{3}{2} \frac{2}{2} \frac{5}{2} 3$$

$$S_{6} = \frac{\frac{1}{2}}{3} \left[f(0) + 4 f(\frac{1}{2}) + 2 f(1) + 4 f(\frac{3}{2}) + 2 f(2) + 4 f(\frac{5}{2}) + f(3) \right]$$

Where K is a number such-that $|f''(x)| \le K$ for all x in [a,b]; i.e., K is an upper bound for

|f''(x)| on [a,b]For Simpson's rule: $|E_S| \leq \frac{K(b-a)^5}{180 n^4}$

where K is a number such that $\left| \frac{180 \, n^4}{p^{(4)}(x)} \right| \leq K \, \text{for all } x \, \text{in } [a,b].$

E_g . $\int_{e}^{2} dx$.

- 1) Use the midpoint rule for n = 10 to estimate this integral. ___ M10.
 - 2) Find an upper bound for the error in using M10 to estimate the integral, i.e., find an upper bound for E_{M10}.

$$\Delta x = \frac{1-0}{10} = \frac{1}{10} = 0.1$$

$$M_{10} = (0.1) \cdot \left[\frac{1}{4} (0.05) + \frac{1}{4} (0.15) + \cdots + \frac{1}{4} (0.95) \right]$$

$$M_{10} \approx 1.460393.$$

Tuesday, February 27, 2018 2:29 PM

(E) Find an upper bound for $E_{M_{10}}$ (E) $= \begin{cases} e^{x^2}dx - M_{10} \end{cases}$ By the error bound formula: $\begin{cases} E_{M_{10}} &= \begin{cases} e^{x^2}dx - M_{10} \end{cases} \end{cases}$ (b) $= \begin{cases} E_{M_{10}} &= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (b) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (b) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (c) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (d) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (e) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (e) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (f) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) $= \begin{cases} E_{M_{10}} &= \\ E_{M_{10}} &= \end{cases} \end{cases}$ (h) =

 $f''(x) = 2xe^{x^2}.$ $f'''(x) = 2\left[1/e^{x^2} + x \cdot 2x \cdot e^{x^2}\right]$ $f'''(x) = 2e^{x^2}\left(1 + 2x^2\right)$ This is already positive, no need for abs.

Q: What is the maximum value of f'''(x) on [0,1]?

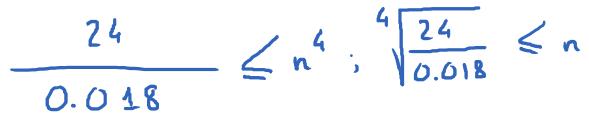

— find K.

Since $f''(x) = 2e^{x^2} (1 + 2x^2)$ is an increasing function on [0,1], the largest value of the function is at x = 1. So, $K = |f''(1)| = |2e^{4} \cdot (1+2)|$ $|E_{M_{10}}| \le \frac{6e \cdot (1-0)^3}{24 \cdot (10)^2} \approx 0.0067$

this tells you that the arran of the approximation in 1 cannot be more than this number.

E.g. Using the error bound for the Simpson's Rule. Determine the smallest value of n such that the Simpson approximation to $\int \frac{L}{x} dx$ is accurate to within 0.0001?

 $\leq \frac{\left[\frac{K(b-a)^{3}}{180n^{4}}\right]^{2}$ Want: find n nother (k) (b-6) 5 < 0.0001 K is an upper bound fin $|f^{(4)}(x)|$ on [1,2]. $f(x) = \frac{1}{x}$; $f'(x) = -x^{-2}$; $f''(x) = 2x^{-3}$ $\xi^{(3)}(x) = -6x^{-4}; \quad \xi^{(4)}(x) = 24x^{-5} = \frac{24}{x^5}.$ Since $f^{(4)}(x) = \frac{24}{5}$ is a decreasing function on [1,2], the maximum value of it on (1,2) is: $\frac{24}{(1)^5} = 24$. ≤0.0001 - solve this inequality 24 < (0.0001) · 180 n4
