

3.1. Radian Measure

Thursday, February 14, 2019

8:02 AM

1°

Divide the circle into
360 equal parts.

1 radian

Circle, radius $R = 2$ inches

length of arc = 2 inches

central angle has measure
1 radian

Radius = R , arc length = s

θ = angle intercepted by this arc.

The measure of θ in radians is : $\theta = \frac{s}{R}$

$$\theta = \frac{s}{R} = \frac{2\pi R}{R} = 2\pi$$

So, $360^\circ = 2\pi$ radians

→ $180^\circ = \pi$ radians

$$1^\circ = \frac{\pi}{180} \text{ radians}$$

$$1 \text{ radian} = \frac{180}{\pi} \text{ degrees}$$

To convert from

degree $\xrightarrow{\text{multiply by } \frac{\pi}{180}}$ radian

radian $\xrightarrow{\text{multiply by } \frac{180}{\pi}}$ degree

Ex. Convert the following to radians

(a) 30°
 $\frac{\pi}{6}$

(b) 45°
 $\frac{\pi}{4}$

(c) 60°
 $\frac{\pi}{3}$

(d) 90°
 $\frac{\pi}{2}$

(e) 120°
 $\frac{2\pi}{3}$

(f) 135°
 $\frac{3\pi}{4}$

Ex. Convert the following to degrees

(a) $\frac{5\cancel{\pi}}{6} \cdot \frac{180}{\cancel{\pi}}$
 150°

(b) $\frac{7\pi}{6}$
 210°

(c) $\frac{11\pi}{6}$
 330°

(d) $\frac{3\pi}{4}$
 135°

(e) $\frac{5\pi}{4}$
 225°

(f) $\frac{7\pi}{4}$
 315°

HW: Fill out the rest of the circle.

Import family of angles that have the same reference angle.

$$\frac{\pi}{4}, \frac{3\pi}{4}, \frac{5\pi}{4}, \frac{7\pi}{4} \quad \text{Reference angle: } \frac{\pi}{4}$$

$$\frac{\pi}{3}, \frac{2\pi}{3}, \frac{4\pi}{3}, \frac{5\pi}{3} \quad \text{_____} : \frac{\pi}{3}$$

$$\frac{\pi}{6}, \frac{5\pi}{6}, \frac{7\pi}{6}, \frac{11\pi}{6} \quad \text{_____} : \frac{\pi}{6}$$

θ	$\sin \theta$	$\cos \theta$	$\tan \theta$	$\sec \theta$	$\csc \theta$	$\cot \theta$
$\frac{\pi}{6} = 30^\circ$	$\frac{1}{2}$	$\frac{\sqrt{3}}{2}$	$\frac{\sqrt{3}}{3}$	2	$\frac{2\sqrt{3}}{3}$	$\sqrt{3}$
$\frac{\pi}{4} = 45^\circ$	$\frac{\sqrt{2}}{2}$	$\frac{\sqrt{2}}{2}$	1	$\sqrt{2}$	$\sqrt{2}$	1
$\frac{\pi}{3} = 60^\circ$	$\frac{\sqrt{3}}{2}$	$\frac{1}{2}$	$\sqrt{3}$	$\frac{2\sqrt{3}}{3}$	2	$\frac{\sqrt{3}}{3}$

E.g. Find the exact value of:

(a) $\tan \frac{2\pi}{3}$

Reference angle: $\frac{\pi}{3} \rightarrow \tan \frac{\pi}{3} = \sqrt{3}$

Quadrant: II $\rightarrow \tan \frac{2\pi}{3} = -\sqrt{3}$

(b) $\sec \frac{7\pi}{4}$ Reference angle: $\frac{\pi}{4} \rightarrow \sec \frac{\pi}{4} = \sqrt{2}$

Quadrant: IV $\rightarrow \sec \frac{7\pi}{4} = \sqrt{2}$

(c) $\sin \left(-\frac{7\pi}{6} \right)$

Coterminal: $-\frac{7\pi}{6} + 2\pi = \frac{5\pi}{6}$

Reference angle: $\frac{\pi}{6} \rightarrow \sin \frac{\pi}{6} = \frac{1}{2}$

Quadrant: II $\rightarrow \sin \left(-\frac{7\pi}{6} \right) = \frac{1}{2}$

(d) $\cos \left(-\frac{14\pi}{3} \right)$

Coterminal: $-\frac{14\pi}{3} + 3 \cdot 2\pi = -\frac{14\pi}{3} + 6\pi = \frac{4\pi}{3}$

Reference angle: $\frac{\pi}{3} \rightarrow \cos \frac{\pi}{3} = \frac{1}{2}$

Quadrant: III $\rightarrow \cos \left(-\frac{14\pi}{3} \right) = -\frac{1}{2}$

$$\textcircled{a} \cos(3\pi) = \cos(\pi) = -1$$

$$\cos(2019\pi) = \cos(\pi) = -1$$

$$\cos(2020\pi) = \cos(0) = 1$$

$$\cos(k\pi) \begin{cases} 1 : k \text{ is even} \\ -1 : k \text{ is odd} \end{cases}$$

$$\sin(k\pi) = 0$$

Formula for finding reference angle of angle θ in $[0, 2\pi]$
