

## 2.5 - Part 2

Tuesday, February 18, 2020

10:01 AM

Recall: Given  $y = f(x)$  and  $c$  is a positive number

$y = f(x) + c$  : up by  $c$  units

$y = f(x) - c$  : down by  $c$  units

} vertical shifts

$y = f(x + c)$  : left by  $c$  units

$y = f(x - c)$  : right by  $c$  units

} horizontal shifts

### Obj 3: Vertical Shrinking and Stretching.

Given a function  $y = f(x)$  and a positive number  $c$ .

Stretching:  $c > 1$

The graph of

$$y = c \cdot f(x)$$

is the graph of  $y = f(x)$

vertically stretched by a factor of  $c$

Shrinking:  $0 < c < 1$

The graph of

$$y = c \cdot f(x)$$

is the graph of  $y = f(x)$

vertically shrunk by a factor of  $c$

E.g. Given  $y = f(x) = x^2$

(a) What is the formula for  $y = \boxed{2}f(x)$

$$y = 2x^2$$

(b) Graph  $y = f(x)$  and  $y = 2f(x)$ . (5 keypoints)

$x$	$y = f(x) = x^2$
-2	4 $\rightarrow (-2, 4)$
-1	1 $\rightarrow (-1, 1)$
0	0 $\rightarrow (0, 0)$
1	1 $\rightarrow (1, 1)$
2	4 $\rightarrow (2, 4)$

$x$	$y = 2f(x) = 2x^2$
-2	8 $\rightarrow (-2, 8)$
-1	2 $\rightarrow (-1, 2)$
0	0 $\rightarrow (0, 0)$
1	2 $\rightarrow (1, 2)$
2	8 $\rightarrow (2, 8)$

Each  $y$ -coordinate is multiplied by 2

E.g. Graph  $y = |x|$  (3 key points)

Use transformation to graph  $y = \frac{1}{2}|x|$

$x$	$y =  x $		
-2	2 $\rightarrow (-2, 2)$	Shrink $\rightarrow$	$(-2, 1)$
0	0 $\rightarrow (0, 0)$	$\rightarrow$	$(0, 0)$
2	2 $\rightarrow (2, 2)$	$\rightarrow$	$(2, 1)$

$y$ -values are multiplied by  $\frac{1}{2}$ .

## Obj 4: Reflections of graphs.

Reflection about the x-axis.

The graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected about the x-axis.

E.g. Given  $y = f(x) = x^3$

Graph using 3 key points.

Use transformation to graph  $y = -f(x) = -x^3$

$x$	$y = f(x) = x^3$	Reflect
-1	$(-1)^3 = -1 \rightarrow (-1, -1)$	$\rightarrow (-1, 1)$
0	$0 \rightarrow (0, 0)$	$\rightarrow (0, 0)$
1	$1^3 = 1 \rightarrow (1, 1)$	$\rightarrow (1, -1)$

The sign of each y-coordinate changes

Obj 5: Sequences of transformations.

Given  $y = f(x) = x^2$ .

(a) What is the formula for  $y = 2 \cdot f(x+3) - 1$ ?

(b) Graph the original function using 3 key points.

Use transformation to graph the transformed function.

(a)  $y = \boxed{2}(\boxed{x+3})^2 \boxed{-1}$

(b) Left 3 units, Vertically stretch by a factor of 2

Down 1 unit.

Parent function is  $y = f(x) = x^2$ .

$x$	$y = f(x) = x^2$	
-1	1 $\rightarrow (-1, 1)$	(Subtract x-coord by 3) Left 3 units $\rightarrow (-4, 1)$
0	0 $\rightarrow (0, 0)$	
1	1 $\rightarrow (1, 1)$	

Stretch Vertically  
by 2  
(multiply y-coord  
by 2)

$(-4, 1)$   $\xrightarrow{\text{Down by 1}}$   $(-4, 2)$   
(Subtract y-coord  
by 1)

$(0, 0) \rightarrow (-3, 0) \rightarrow (-3, 0) \rightarrow (-3, -1)$

$(1, 1) \rightarrow (-2, 1) \rightarrow (-2, 2) \rightarrow (-2, 1)$
